Notes

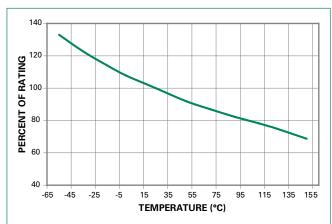

- 11. AC Interrupting Rating tested at rated voltage with unity power factor. DC Interrupting Rating tested at rated voltage with time constant < 0.8 msec.</p>
- 2. Nominal Resistance measured with < 10% rated current.
- 3. Nominal Melting I²t measured at 1 msec. opening time.
- 4. Nominal Voltage Drop measured at rated current after temperature has stabilized.

Devices designed to carry rated current for 4 hours minimum. It is recommended that devices be operated continuously at no more than 80% rated current. See "Temperature Re-rating Curve" for additional re-rating information.

Devices designed to be mounted with marking code facing up.

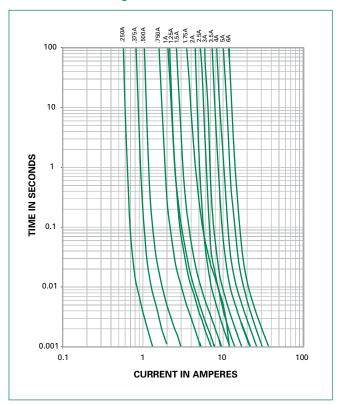

Temperature Re-rating Curve

1. Re-rating depicted in this curve is in addition to the standard re-rating of 20% for continuous operation.

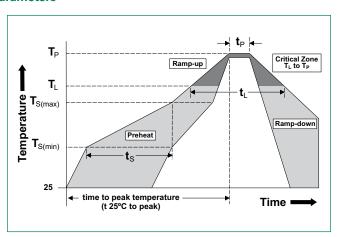

For continuous operation at 75 degrees celsius, the fuse should be rerated as follows: $I = (0.80)[0.85]_{RAT} = (0.68)_{RAT}$
